Smartphone, work

Abstract

Abstract. This research aims to examine how much impact the use of smartphones has in supporting work where this is based on the rise of people now using smartphones in everyday life, especially in terms of work. This research uses quantitative with survey techniques. The sample from this study was food vendors, students, and teachers as many as 6 people using questions and reports on smartphone use in terms of work. As we know at this time smartpone has become a must for everyone because smartphones are easy to carry, use, and very important roles such as can be used to see certain tutorials, schoolwork, meetings, and when online classes teach during the corona virus pandemic

1. INTRODUCTION

Nowadays, many humans have used technology as a support in making their lives easier, inseparable from smartphones. Humans now from childhood to adulthood already use smartphones in their daily lives. So how effective is a smartphone in making work easier. Here the author will try to examine how much use and impact the smartphone can produce to people who will be tested later. And hopefully with this research we will know how big the impact of smartphone today and in this era realm of shaping students' cognitive processes and learning, the teacher plays a critical functions. Thus, a teacher's readiness to utilize resources that enhance learning activities, such as media, techniques, and instructional materials, significantly contributes to the effectiveness of the learning process.

2. DISCUSSION

According to Gary B, Thomas J & Misty E, 2007, a smartphone is an internet enabled phone that usually provides Personal Digital Assistant (PDA) functions, such as calendar functions, agenda books, address books, calculators, and notes. Apart from being a medium that can facilitate daily communication, there are various kinds of cellphone functions that are no less important. In this case, the function of the mobile phone can act as a means to operate various applications that help work to important data storage media. According to David Wood, smartphones are smart phones that have advantages compared to other telecommunications equipment. The advantages will be visible from the manufacturing process as well as the process in its use. According to Ridi Ferdiana regarding the definition of the meaning of a smartphone, he explained that it is a mobile phone device that is equipped with various features. Therefore, in addition to being a telecommunications tool, a smartphone can also be used for business purposes that can be used by entrepreneurs and the general public. So it can be interpreted that a smartphone is a smart cellphone that can be used as a business purpose that can be used by entrepreneurs and the public.

3. CONCLUSION

Based on research, it was found that the first food sellers did not get very beneficial benefits in using smartphones because they only used smartphones to call or text when someone asked to be delivered to their store. The second food seller is more advantageous in terms of smartphone use because he uses facebook media to promote his sales to many people who know better and order to the seller.

The first and second students also get the benefit of using smartphones because they can promote the goods they sell in the student grub and get a lot of attention so that other students are interested in coming and buying to the canteen they make.

The first teacher relies heavily on smartphones, she uses smartphone in teaching to her students such as zoom meetings or google meets in use to meet face to face if the teacher cannot or is in class so that children can use zoom meetings or google meet also use google forms to fill out the absences of children who are present at the time. And even when in class, the teacher can give lessons in the form of hearing English songs. And using the whatsapp and google classroom applications as a provider of assignments and done by students. The second teacher doesn't rely too much on smartphones, only uses smartphones to grub students' whatsapp and google classroom if they want to give assignments that they have forgotten to tell in class. And when the teacher is unable to be in the classroom, his role is replaced by another teacher so that the schedule is not empty.

4. THANKYOU

Thank you to those who played a role in this research: food vendors, students, and teachers who can be asked for answers about the use of smartphones in their activities in their needs in using smartphones in their lives
